### Introduction

In today's fast-paced world, innovation is key to solving real-world problems. Introducing children to the concept of innovation can help them develop critical thinking, creativity, and problem-solving skills. Here's a 6-step model to guide children in their innovation journey.

### Step 1: Problem Identification

Encourage children to observe their surroundings and identify problems that need solutions. This could be anything from a broken toy to a difficulty in their daily routine. Ask them to write down the problem and think about its impact.

### Step 2: Brainstorming

Once a problem is identified, have children brainstorm potential solutions. Encourage wild and creative ideas, without worrying about feasibility. This step helps develop their critical thinking and creativity skills.

### Step 3: Interrogation

In this step, children should ask questions about their potential solutions. What are the benefits and drawbacks? Is it feasible? What resources would be needed? This step helps them think critically about their ideas.

### Step 4: Create a Prototype

Encourage children to create a prototype of their solution. This could be a drawing, a model, or a simple prototype using everyday materials. This step helps them visualize their idea and make necessary adjustments.

### Step 5: Marketing

Teach children to think about how they would market their solution. Who would be interested? How would they promote it? This step helps them develop their entrepreneurial skills and think about the commercial viability of their idea.

### Step 6: Business Canvassing

In this final step, children should present their idea to others, whether it's family, friends, or a panel of judges. Encourage them to articulate their idea, its benefits, and how it solves the problem. This step helps build their confidence and public speaking skills.

### Conclusion

Innovation is a process that can be learned and developed. By following these 6 steps, children can cultivate a mindset that encourages creativity, critical thinking, and problem-solving. Who knows, the next big idea could come from a young innovator! Let us all encourage our children to work with organisations such as Young African Robotics Association (YARA) and Elevate Trust Zimbabwe.
